PROJECT OVERVIEW

ROADMAP

**DATA &
METHODOLOGY**

**KEY PERFORMANCE
INDICATOR**

**DASHBOARD
ANALYSIS & INSIGHTS**

RECOMMENDATIONS

Project Overview

Our project addresses inefficiencies in logistics operations and helps identify key factors affecting delivery performance. It analyzes orders, drivers, vehicles, and hubs to improve efficiency and enhance customer satisfaction.

Our scope

Orders Flow

Shows how orders move from placement to delivery and helps identify demand trends and peak periods for better planning.

Driver Performance

Evaluates drivers based on experience, ratings, and delays to improve efficiency and service quality.

Vehicle Usage

Analyzes how vehicles are used and which types handle more orders to optimize fleet performance.

Hub Efficiency

Measures how efficiently hubs process orders compared to their capacity, helping reduce overload and improve distribution.

Customer Satisfaction

Reflects customer experience and is directly affected by delivery time and service quality.

Vision to Execution Roadmap

Data & Methodology

The project followed an end-to-end analytics workflow

- Integrated multiple logistics-related tables into a unified data model
- Established relationships between orders, drivers, vehicles, hubs, and date tables
- Created calculated measures and KPIs using DAX formulas
- Applied data modeling techniques to improve reporting performance
- Designed scalable and interactive dashboards for operational analysis

Manage relationships

+ New relationship ⚡ Autodetect Edit Delete Filter

☐ From: table (column) ↑	Relationship	To: table (column)	Status
☐ Orders (Driver ID)	* ← 1	Drivers (DriverID)	Active ...
☐ Orders (Hub Name)	* ← 1	Hubs (HubName)	Active ...
☐ Orders (Order Date)	* ← 1	Date Table (Date)	Active ...
☐ Orders (Vehicle Name)	* ← 1	Vehicles (Vehicle Code)	Active ...

Key Performance Indicators

We developed key performance indicators to measure logistics efficiency and monitor operational performance.

CSAT %

84.4%

PM: **84.4%**
0.0% from PM

Avg Delivery Time (Hrs)

35.73

PM: **35.77**
-0.1% from PM

On Time Delivery Rate

79.6%

PM: **79.6%**
0.0% from PM

Total Orders

25852

PM: **24732**
4.5% from PM

Measures customer satisfaction with the delivery service and helps identify the impact of delays on customer experience.

Tracks the average time required to complete deliveries and helps evaluate operational efficiency, delivery speed, and potential delays in the logistics process.

Shows the percentage of orders delivered on schedule and reflects delivery reliability, service efficiency, and the company's ability to meet customer expectations.

Represents the total number of processed delivery orders and provides insight into operational workload, delivery demand, and overall business activity.

Dashboard Analysis & Insights

Overall view of logistics operations performance

- The dashboard shows a total of 25852 processed orders during the selected period.
- On-time delivery rate reached 79.6%, which reflects overall delivery performance and operational efficiency.
- Customer satisfaction scored 84.4%, indicating generally positive customer experience.
- Vehicle maintenance represented 26.67% of the fleet status, highlighting the importance of maintenance management.
- Houston Hub processed the highest number of orders compared to other hubs.
- Some drivers recorded higher delayed delivery rates, helping identify performance gaps.

Dashboard Analysis & Insights

Analyzes delivery performance and customer satisfaction across hubs and drivers.

- ▶ Dallas Main Hub recorded the highest total and delayed orders among all hubs.
- ▶ Customer satisfaction scores decreased when deliveries were delayed.
- ▶ Some drivers maintained higher satisfaction scores despite operational challenges.
- ▶ The overall CSAT score reached 84.7%, indicating a generally positive customer experience.
- ▶ Delayed orders varied significantly across hubs, highlighting operational performance differences.

Dashboard Analysis & Insights

Analyzes order distribution and operational performance across drivers, hubs, and vehicle models.

- Full-time drivers handled the majority of total orders compared to part-time and contract drivers.
- Freightliner M2 recorded the highest number of processed orders among vehicle models.
- El Paso Hub showed strong operational contribution within the selected analysis path.
- Driver Daniel Lee handled the lowest number of orders under the selected filters.

Recommendations

Improve Preventive Maintenance

What we found:

Vehicle Breakdowns were one of the main causes of delayed deliveries.

What we recommended:

- Strengthen preventive maintenance.
- Monitor vehicle condition regularly
- Improve delivery reliability

Step
01

Identify Segment

What we found:

Some hubs, such as Houston Hub, handled significantly higher order volumes compared to other hubs.

What we recommended:

- Redistrivute workload to lower-pressure hubs like El Paso and San Antonio.
- This could improve operational efficiency and increase on-time delivery rates.

Step
02

Focus on Delivery Performance Metrics

What we found:

Driver experience years showed little impact on actual performance.

What we recommended:

Focus more on operational KPIs such as On-Time Delivery Rate, delay count, and customer satisfaction scores.

Step
03

Recommendations

Optimize Fleet Utilization

What we found:

Certain vehicle models experienced higher breakdown rates and delivery days

What we recommended:

- Monitor vehicle performance
- Replace high-risk vehicles

This can improve fleet efficiency and reduce operational interruptions

Step
04

Prepare for Peak Demand Periods

What we found:

High-order periods may negatively affect delivery performance and customer satisfaction.

What we recommended:

- Plan additional driver availability
- Ensure vehicle readiness during peak months.

Step
05

Enhance Customer Experience

What we found:

Delayed deliveries were associated with lower customer satisfaction scores.

What we recommended:

- Reduce Delivery times.
- Improve Operational Response.

This can improve customer experience and CSAT ratings.

Step
06
